

FINEART PROTECT (NOZZLE)

GFAP-N

Application

ILFORD GALERIE FineArt Protect (Nozzle) is a water-based coating solution designed to protect images printed on ILFORD GALERIE FineArt media as well as other Fine Art inkjet prints. It is especially designed to protect Fine Art inkjet paper from scratches and UV light without changing the original tint, colour reproduction and texture of the print.

Features

- Protects against UV light
- Scratch resistant
- Maintains original tint, colour and texture of the print
- Non-hazardous
- Odourless
- Easy to apply

How to Apply

It is recommended to leave the prints for at least 24 hours after printing before applying the protective coating.

Please spray 30ml/m² of liquid all over the print approximately 30cm from print surface. (please see the scale on the bottle for further details).

The following is a guide indicating the amount of coating solution required.

Print size	A4	A3	A2
Amount to apply	2ml	4ml	8ml
Nozzle pushes	5-7 times	12-14 times	26-28 times

It is important that only one layer is applied and it needs to be applied quickly. If a second layer is applied after the initial coating has dried, then coating mottle may occur.

The layer will take approximately one hour to dry. Please do not touch the coated surface during this time.

Please test the print using the paper and ink combination you plan to protect as different paper and ink combinations may have different results.

Some papers may not be applicable or it is not necessary to apply protective coating.

Specification

pH: 7-8
component for layer formation: 2-3 %
specific gravity: 0.93

Availability

500ml with spray nozzle head

IMPORTANT!

Please store between 5 to 40°C and only use at 10°C and above. Please securely close the nozzle cap after use to prevent the solution from clogging the nozzle head and wash the nozzle head in case you intend not to use it for a long period.
